Pivot Homepage

When you first log in to Pivot, you are brought to your **Homepage**. Think of your **Homepage** as the place you manage funding opportunities and funding searches you are interested in, track who you have shared opportunities with, and view suggestions received from the **Advisor**. It's also the launch pad to funding and profile searches.

Your Pivot **Homepage** is organized in several areas:

- **Active** opportunities
- **Tracked** opportunities (what you see by default when you log-in)
- Saved **Searches**
- **Shared** opportunities (those you shared with someone)
- **Received** opportunities (sent to you by another Pivot user)
- Suggestions from the **Advisor**

You can also navigate directly to the **Funding** and **Profile** areas, as well as conduct a search for funding or profiles from your **Homepage**. You can either click the Funding, Profiles, or (if you're an Administrator) the Admin tabs, or type in a term in the search box near the upper right of the screen to search either the funding or profile database (with a dropdown menu allowing you to choose which database).

You can also choose your preferred view of your Active or Tracked opps by using the filters along the left side of the page. You can view by **Type**, which includes opps categorized by:

- **Limited Submission** (opportunities where the sponsor accepts only a specified number of proposals or applications from an institution)
- **Internal Coordination** (opportunities that require some coordination at the university level prior to the sponsor deadline. This might be a ranking requirement, a limit on the number of times an applicant may submit, or some other special requirement by the sponsor)
- **Other** (all opportunities that are NOT Limited Submission or Internal Coordination)
- **Expired** (only for Active and Tracked lists)
- **Country** (only for your Advisor suggestions)

The **Shared** opportunities area also has filters to sort what you've shared by **Opportunity** or **Person**.

Or you can view only certain **tagged** opps in your lists; the **tags** you are currently using will be listed for you to select or deselect as you'd like. If you have tagged any of your saved searches, you view those by selected tags as well.
