Lessons from Abroad: How Europeans have tackled opioid addiction and what the U.S. could learn from them.

This series of stories reported in late 2018 explores how Switzerland, France and other European countries implemented drug policies and programs that have diminished their rates of opioid overdose and related infections.

Both the Swiss and the French accomplished this by supporting drug users in different ways.

Switzerland led Europe with the first drug consumption rooms and heroin assisted treatment facilities. The Swiss approach is all about removing barriers and getting the majority of drug users into treatment. This resulted in trickled down benefits for law enforcement as the street drug market weakened and the theft rate dropped.

The French approach is about seeing drug users as people first and supporting the whole person. There are more than 300 harm reduction centers, that include needle exchanges, places to shower, do laundry, meet with social workers, psychiatrists and medical doctors. In addition to that, there are 480 addiction treatment facilities. The whole network works together to support drug users to live their best lives.

Taking an interdisciplinary approach

What related expertise are we aware of?
What do we need?

Big problems require interdisciplinary efforts

Brown bristles at the suggestion that the global push for interdisciplinarity might be a fad.

“The answer is a resounding 'no',” he says. “Things have changed — now people focus on big problems, and if you go for a big problem you need to be interdisciplinary.”

Excerpt (full citation on slide 30)

Exploring relevant fields

Beginning broadly, what are the relevant fields of research that should be pulled together for a multidisciplinary/interdisciplinary approach to the issue?

For this sample search, a boolean search of full data in Dimensions was used, limited to publication dates within the last 10 years
"opioid addiction" AND (studies OR therapy OR solution OR intervention OR policy)

| Field of Research | Publication count | Total citations to set |
|--|-------------------|------------------------|
| Public Health and Health Services | 4,533 | 68,711 |
| Clinical Sciences | 2,435 | 30,919 |
| Pharmacology and Pharmaceutical Sciences | 1,882 | 30,106 |
| Psychology | 1,359 | 18,163 |
| Neurosciences | 1,227 | 20,272 |
| Nursing | 417 | 2,943 |
| Paediatrics and Reproductive Medicine | 339 | 4,807 |
| Genetics | 199 | 2,711 |
| Law | 188 | 719 |
| Applied Economics | 174 | 720 |

Looking among the top 10 fields of research based on publication volume alone gives some insight and demonstrates the diversity of fields publishing related work

Go beyond the “top” fields in publication volume to identify valuable contributions that occur in fields of that may be overlooked

| Field of Research | Publication count | Total citations to set |
|--|-------------------|------------------------|
| Policy and Administration | 143 | 905 |
| Sociology | 124 | 680 |
| Biochemistry and Cell Biology | 122 | 1,576 |
| Cognitive Sciences | 88 | 1,084 |
| Education | 84 | 267 |
| Political Science | 76 | 190 |
| Immunology | 73 | 817 |
| Artificial Intelligence and Image Processing | 72 | 361 |
| Analytical Chemistry | 67 | 655 |
| Criminology | 63 | 438 |

More than ever, it's critical to examine not only the “what” but the “how” - for example, how is artificial intelligence being used in studies? What are the implications or advantages?

Examine related publication trends by field

Here we've limited to seven selected fields of research to get a sense of trends in related publication volume for each.

Are these fields increasing their contributions in this area?

How can we leverage upward trends to make our efforts more inclusive of these fields?

Leveraging both internal and external expertise

What expertise exists at my institution?
What expertise do we need to seek out?

Find out who your experts are and who they're already collaborating with

- Analyze data from internal faculty information management systems
 - Publications - journal articles, books, chapters, preprints, conference proceedings
 - Professional activities
 - Awarded funding
 - Intellectual property
- Supplement this knowledge other resources such as
 - ORCID profiles
 - Researcher/lab/institute websites
 - Dimensions
 - Web of Science
 - Scopus
- Network analysis - [VOSviewer](#) (free network visualization software)

What expertise do you need?

number of publications in each research category. (Criteria: see below)

In this example, we've looked at the research categories of articles related to our search with authors at King's College London. While they have a level of authorship in some fields, more expertise would be beneficial to address the issues involved as reflected by the original search.

Identifying potential partners outside of academic institutions

Effective strategies involve different partnerships

Funders

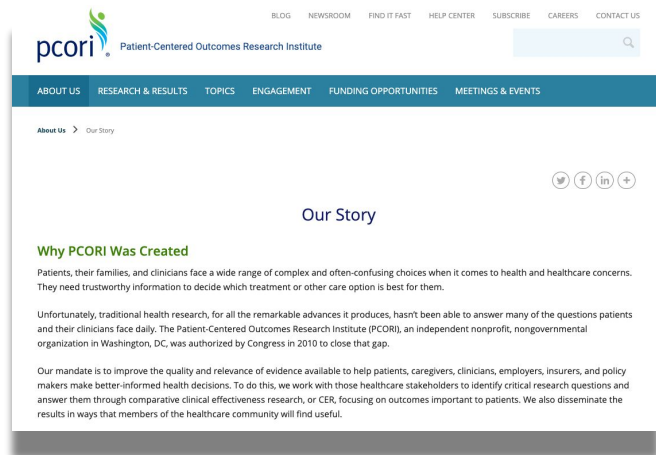

Where is most of the funding for related research coming from?

Historically, the National Institute on Drug Abuse (NIDA) has, somewhat unsurprisingly, been the leading funder on this issue.

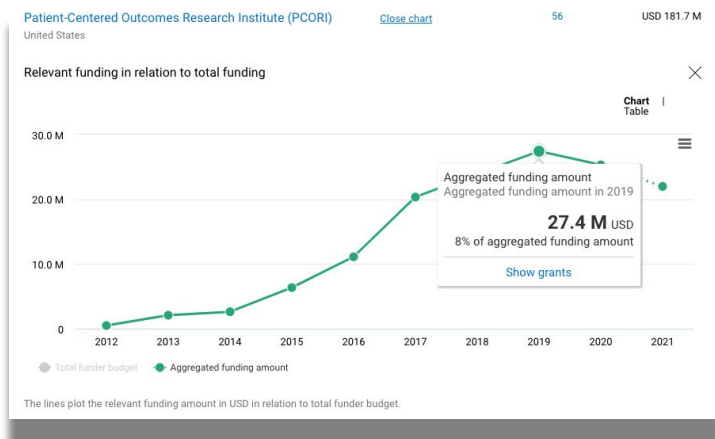

However we can also identify other funders that may not be awarding at the same level who are making related investments.

Are particular funders increasing or decreasing their investments in this area?

The second leading funder, PCORI, is a relative newcomer, authorized by the US Congress in 2010 in order to “to improve the quality and relevance of evidence available to help *patients, caregivers, clinicians, employers, insurers, and policy makers* make better-informed health decisions.”

If we broaden our search somewhat to limit to the word “opioid” in the grant title or abstract, we can see a fairly steady upward trend.

Are particular funders increasing or decreasing their investments in this area?

By contrast, the National Institutes of Mental Health, one of the funders who has awarded *more* in total aggregated funds, does not reflect the same steady upward trend nor the level of recent awarded funds in this area.

The importance of finding funding collaboratives

A public-private collaborative including the state of Michigan and key nonprofit funders, the Michigan Opioid Partnership's mission is to decrease Michigan opioid overdoses and deaths through prevention, treatment, harm reduction and sustained recovery.

Part of **DIGITAL**science

Data shows an increase in awarded funding from these collaborators

Exploring non-federal funding is highly recommended. With increasing competition for federal grants, diversifying your pool of potential funding sources can be reap benefits.

Look for funders that want to work within and for your community or region in particular, and utilize partnerships and collaborations between your institution, local community organizations and industry partners to strengthen your grant applications.

Policy makers

CALL TO ACTION

Public Libraries and the Opioid Crisis

Using policy documents to enhance strategy and amplify outputs

- Incorporate policy documents into your landscape analysis
- Understand the leading publishing organizations
- Invite authors to participate in events or projects
- Share your results with the appropriate audiences
- Demonstrate the impact of your work by determining which policy documents have cited your research (example below)

The screenshot shows the Dimensions database interface. At the top, there's a search bar with the text "e.g. plastic AND instrument" and a "Save / Export" button. Below the search bar, there's a link "< Go back". The main content area displays a publication titled "More educated emergency department patients are less likely to receive opioids for acute pain" from the journal "Pain", 153(5), 967-973 - March 2012. The authors listed are Timothy F. Platts-Mills, Katie M. Hunold, and Andrey V. Bortsov. Below the authors, there's a section for "Policy document citations - 1" with a "Show all" link. The citation listed is "Un-burying the lead: Public health tools are the key to beating the opioid epidemic" from 2018, published by the Brookings Institute. The abstract of the publication is partially visible at the bottom.

Abstract

Inadequate treatment of pain in United States emergency department patients determine the relationship between patient socioeconomic characteristics and pain data obtained as part of a multicenter study of outcomes after minor motor vehicle collision (MVC). Study patients were non-Hispanic white patients between the ages of 18 and 65 years who were evaluated and discharged home from 1 of 8 EDs in 4 states. Socioeconomic characteristics include educational attainment and income. Of 690 enrolled patients, the majority had moderate or severe pain (80%). Patients with higher education attainment had lower levels of pain, pain catastrophizing, perceived life threat, and distress. More educated patients were also less likely to receive opioids

Industry partners

The value of industry partnership

“NIH will continue to build upon breakthroughs in the treatment of opioid addiction and the reversal of opioid overdose and find ways to advance the development of new products. For example, buprenorphine, one of the three FDA-approved options for MAT treatment, was developed through a partnership between NIH and industry. The intramural program of the National Institute on Drug Abuse (NIDA) conducted the early clinical studies on buprenorphine and then later partnered with industry to develop user-friendly and abuse deterrent formulations. In addition, a NIH public-private partnership helped to develop the only FDA-approved intranasal naloxone product to reverse opioid overdose, an invaluable tool to those on the front lines combating the opioid crisis.”

The Federal Response to the Opioid Crisis (testimony to Congress)
October 5, 2017
Presented by Dr. Francis Collins, NIH Director and others
Presented to Senate Committee on Health, Education, Labor & Pensions

Written testimony on behalf of the following witnesses from the Department of Health and Human Services (HHS):
Elinore McCance-Katz, M.D., Ph.D., Assistant Secretary for Mental Health and Substance Use, Substance Abuse and Mental Health Services Administration, HHS
Deborah Houry, M.D., MPH, Director, National Center for Injury Prevention and Control, Centers for Disease Control and Prevention, HHS
Francis Collins, M.D., Ph.D., Director, National Institutes of Health, HHS
Scott Gottlieb, M.D., Commissioner, Food and Drug Administration, HHS

Common partnership needs

Source - [World Economic Forum](#)

We often think of academic-industry partnerships as illustrated on the left, but project-specific partnerships can be just as fruitful for both parties.

Some common needs still apply (and can go both ways):

- Solutions for concerns
- Funding & infrastructure
- Feasible goals
- Operational approach

This is a sample search using Dimensions specifically for patent records related to substance abuse with "opiod addiction" OR "opiod abuse" appearing in the text.

Just as with publications, examine patent record assignees through various lenses

The screenshot shows the Dimensions web application interface. At the top, the search bar contains two filters: "0801 Artificial Intelligence and I..." and "NOT (Research Organization)". Below the search bar, the query "data AND (management OR collection) AND ("opioid abuse" OR "opioid use" OR "opioid abuse")" is visible. The left sidebar shows a list of filters, with "ASSIGNEES" selected. The main content area displays the "Assignees" section, which is related to the search. A blue callout box highlights the text: "Changing the lens" surfaces entirely different potential partners, in this case focused on data collection and management. The table below lists the assignees and their counts.

| Assignee | Count |
|---|-------|
| Intellectual Ventures (United States) | 21 |
| Becton Dickinson (United States) | 6 |
| Children's National Health System | 5 |
| Parkland Center For Clinical Innovation | 3 |
| Optum (United States) | 2 |
| Pear Therapeutics (United States) | 2 |

Investigate programs and mission statements

Approaching industry partners

- Do any of your researchers have prior collaborations with this organization?
- Do you have alumni at this organization?
- Do you have equipment, expertise or other resources that would be attractive to this organization?
- Are they located in your region?
- Has this organization publicly committed to common goals and outcomes?

Other resources

Wrap-up & Q&A

Key points

- Big challenges require an interdisciplinary approach
- Look out for expertise in fields that are conducting related research (Are fields like emerging technology, ethics, law, policy reflected?)
- Know what expertise you have and where you might need to seek collaboration
- Examine funding trends and investigate funding collaboratives
- Involve partners outside academia
- Take advantage of community resources on best practices for building interdisciplinary teams

Thank you!
